

Ultraviolet Technology

UV Disinfection in Distilling

How Does Ultraviolet Work?

Ultraviolet light causes permanent inactivation of micro-organisms by disrupting DNA. It is effective against all bacteria and fungi, as well as spores and viruses, which are normally present in the air. The maximum effectiveness occurs between 240 and 280 nm and the Hanovia high-intensity Arc Tube produces these wavelengths in abundance.

The Role of UV in Distilling

Water is one of the raw ingredients that gives whisky its distinctive taste.

UV disinfection systems safeguard the water used in the distillery from the risk of water-borne micro-organisms such as bacteria, yeasts, moulds and algae.

Why Do Leading Distillers Choose UV Treatment?

Distillers world-wide trust UV to protect their product from contamination and so enhance quality. It is far superior to more traditional methods :-

- ▶ No spoilage organisms survive UV treatment
- ▶ UV is the most cost effective method of water disinfection
- ▶ UV has no effect on pH, colour, flavour or aroma
- ▶ UV leaves no residue
- ▶ No hazardous or toxic chemicals are produced
- ▶ Permanent accurate treatment records are available using Photon

Applications

Water

Town's water should be free from micro-organisms. However, well water may be contaminated and town's water can pick up infection in storage and in the distillery. Use UV for:

- ▶ Treatment of incoming water from mains or borehole
- ▶ Treatment of water post filter, RO or resin bed
- ▶ Final CIP rinse water - leaving no taint
- ▶ Water used for propagation and preparation
- ▶ Liquor used for CIP rinse in pipework

Packaging Plant

- ▶ Surface disinfection of caps and bottle necks
- ▶ Water for jetting
- ▶ Water for rinsing out cleaning fluids

Hanovia Photon Disinfection System

Air Disinfection

- ▶ Disinfection of head space in water storage tanks
- ▶ Disinfection of air entering plants
- ▶ Disinfection of air supply to yeast preparation area

Hanovia UV-I System

Hanovia UV Systems

Compact and Easy to install

- ▶ Hanovia UV systems conveniently fit into existing pipework in most process areas
- ▶ Minimum site preparation
- ▶ Pre-assembled units available pre-wired and skid mounted, requiring only connection to electrical supply
- ▶ Silent operation
- ▶ Can interface with most computer controlled continuous and batch processes

Inexpensive and Simple to Maintain

- ▶ Simple and safe operation easily understood by operators
- ▶ Designed for remote operation
- ▶ Replacement of Arc Tubes is quick and simple

Rigorous Quality Control ISO 9001

- ▶ All Hanovia stainless steel chambers and Arc Tubes built to the highest possible standards
- ▶ Every Arc Tube is individually checked and each completed system tested and run before despatch
- ▶ Test certificates always supplied

All Hanovia Liquor Disinfection Systems Include:

- ▶ Disinfection Chamber
- ▶ Arc Tube
- ▶ Control / Power Supply Cabinet
- ▶ UV Monitor (optional)
- ▶ Automatic Cleaning Mechanism (optional)

Why is Hanovia the Leading UV Supplier?

- ▶ Hanovia has pioneered the use of UV in various applications for over 75 years
- ▶ Hanovia manufactures its own stainless steel chambers, quartz sleeves and arc tubes to the highest possible standards
- ▶ Hanovia is the only system manufacturer which also makes Arc Tubes
- ▶ Hanovia has a world-wide network of distributors who stock a complete range of spares

UV Dose for the Distillery

The UV dose required for the application should be decided in conjunction with a Hanovia specialist, who will also advise on installation.
